SUBJECT: E5 LIQUID FLY ASH

E5 liquid fly ash is a specific form of fly ash that has been processed into a slurry or liquid form. Fly ash, in general, is often used in construction due to its pozzolanic properties, which means it can react with calcium hydroxide in the presence of moisture to form compounds with cementitious properties.

The presence of E5 liquid fly ash is detrimental to the effectiveness of Tech-Crete2500, CretePro and Bridgedeck. The use of E5 liquid fly ash is not recommended with the use of Alchemco waterproofing products.

Any questions should be directed to the Technical Department or one of the members of the Technical Team.
