**SUBJECT: RUN OFF AND STORM WATER PROCESSING
TECHCRETE 2500, CRETEPRO & BRIDGEDECK**

This Technical Bulletin addresses the concerns about run off from the washing of TechCrete 2500 Waterproofing Agent, CretePro Waterproofing products, and BridgeDeck Waterproofing products and the subsequent effect they have on the storm water system.

All the Alchemco waterproofing products have been tested and certified for use in Potable Water applications. This means that any of our product contained within the waste water from washing is not a hazard to human, plant or animal life. Please note that the testing was done on our product, including all components. We can make no claim to what may or may not be contained within the water used to wash off our product.

Additionally our product will not cause any issues with the most filtration systems used with the collection and processing of storm water, if the waterproofing products are applied per the written specifications and technical data sheets as supplied by Alchemco. Please note that the application instructions require a sufficient quantity of clean water be used in the washing process for both the waterproofing material and the accelerating material.

Any questions should be directed to the Technical Department or one of the members of the Technical Team.
